Document ID: VIB-COMP-005 Classification: INTERNAL CONFIDENTIAL Effective Date: 2024-04-01 Version: 6.0

Document Owner: Head of Compliance & Quality Management

Compliance and Certifications Pack: VI Business (India)

1) Executive Purpose and Applicability

This Compliance and Certifications Pack catalogs the formal external audits, regulatory mechanisms, and sovereign compliances inherently binding the VI Business (India) managed network footprint.

Intended Audience: Information Security Officers, External RFP Auditors, Quality Managers.
Applicability: Vital matrix for completing RFP "ISO Governance," "Statutory IT Compliances," and "Regulatory Boundary" sections.

2) Definitions and Assumptions

Definitions:

- **TRAI:** Telecom Regulatory Authority of India.
- **DoT:** Department of Telecommunications (Gov. of India).
- **DPDP:** Digital Personal Data Protection Act, 2023.

Assumptions:

- **Internal Control:** ISO and SOC 2 expiration dates listed herein dictate explicit recertification project deadlines. Submitting expired certification evidence to an enterprise procurement board constitutes a lethal disqualification risk.

3) Detailed Core Sections

3.1 Sovereign Regulatory Status (Telecom Licensing)

- **Unified License (UL) Framework:** Vodafone Idea Limited intrinsically operates and integrates the managed network overlays under the auspices of a full Unified License granted by the Government of India (DoT).
- **Lawful Interception Mandatory Compliance:** Operations strictly obey DoT security edicts. VI Business maintains mandatory intercept gateways capability on core routing junctions to cooperate unequivocally with Indian law enforcement mandates.
- **TRAI Quality of Service (QoS):** Core access bandwidth adheres structurally to QoS network uptime, contention limits, and latency boundaries enforced natively by TRAI regulations.

3.2 India Data Sovereignty & DPDP Act, 2023

- **Data Fiduciary Relationship:** VI Business explicitly functions as a Data Processor respecting the enterprise payload traversing our managed SD-WANs and ExpressRoutes.
- **Localization Boundary:** 100% of network telemetry, identity token handshakes, ITIL support tickets, and SIEM security logs are physically retained within data centers localized in Pune / Mumbai / Chennai.
- **Assurance Statement:** VI Business mathematically assures zero telemetry data or raw network traffic crosses international sovereign boundaries without explicit written consent from the Customer and adherence to DoT/DPDP cross-border frameworks.

3.3 IT and Information Security Frameworks (ISO Standards) VI Business operations and Managed SOC maintain independent third-party audit recertifications across global security standards:

- **ISO/IEC 27001:2022 (Information Security Management)**
  - *Scope:* The management, delivery, and SOC operations governing enterprise networking solutions.
  - *Next Certification Audit Limit:* `December 31, 2025`
- **ISO/IEC 20000-1:2018 (IT Service Management System)**
  - *Scope:* ITIL v4 alignment integrating Incident, Problem, Change, and Release management for NOC/SOC environments.
  - *Next Certification Audit Limit:* `November 15, 2025`
- **SOC 2 Type II System and Organization Controls**
  - *Scope:* Evaluates the exact operational effectiveness of the "Security" and "Availability" trust principles governing our Tier-III enterprise operations centers.
  - *Report Cadence:* Issued annually covering trailing 12-month operational performance metrics.

4) Evidence and Proof-Artifact Map

Governance Requirement	Evidence Documentation	Repository
	`ISO27001_Current_Cert.pdf`	`SharePoint/VIB_Compliance_Vault`

Governance Requirement	Evidence Documentation	Repository
ISO Audit Request		
SOC 2 Type II Request	`SOC2_Type2_Report_2023.pdf`	(Requires explicit Customer NDA execution prior to release)

5) Governance and Ownership

- **Owner:** Head of Compliance & Quality Management
- **Reviewers:** General Counsel, Enterprise CISO.
- **Review Frequency:** Annually, or instantly triggered upon passing formal external recertification audits.

6) Constraints, Exclusions, and Dependencies

- **Constraints:** High-value comprehensive risk artifacts, notably the full SOC 2 Type II attestation report, operate under severe distribution constraints. They cannot be blindly attached to an RFP submission and obligatorily require the Customer to have a legally binding NDA executed with VIL prior to email transmission.
