Document ID: VIB-PROD-003 Classification: INTERNAL CONFIDENTIAL Effective Date: 2024-04-01 Version: 3.5

Document Owner: VP, Industry Verticals Strategy

Industry Solutions Portfolio: VI Business (India)

1) Executive Purpose and Applicability

The Industry Solutions Portfolio structures pre-configured, standard operational packages (Solutions) aligned specifically to core enterprise vertical markets in India. It enables Bid Teams to instantly recognize which SKUs and architectures solve sector-specific regulatory requirements.

Intended Audience: Sector Leads, Presales Consultants, Strategic Account Directors.
Applicability: Utilized directly in Proposal sections requiring "Domain Intelligence", "Vertical Experience", or pre-packaged industry baseline responses.

2) Definitions and Assumptions

Definitions:

- **SKU Bundle:** A logical combination of Master Catalog items sold as an integrated architecture.
- **cAPN:** Custom Access Point Name.

3) Detailed Core Sections

3.1 Logistics and Supply Chain Matrix

- **Primary Challenge:** Massive geographic spread of distribution centers requiring rapid branch setups in areas possessing inferior terrestrial fiber infrastructure.
- **The VI Business Solution Sequence:**

    - **Architecture:** ZTP-enabled SD-WAN edge nodes leveraging dual Business LTE SIMs as the primary WAN (where fiber is absent/delayed), transitioning instantly to Broadband/Fiber once local Right of Way (RoW) clears.
    - **Mapped SKUs:** `VI-SDW-BAS-CPE` (Basic Edge) + `VI-ACC-LTE-B2B` (Cellular Backhaul) + `VI-IOT-SIM-CAPN` (Fleet Telematics tracking).
    - **Why we win:** Our ability to converge fleet IoT tracking alongside physical warehouse networking natively over a unified management layer.

3.2 Banking, Financial Services, and Insurance (BFSI) Matrix

- **Primary Challenge:** Intense regulatory oversight by the RBI and SEBI, zero-tolerance policies regarding Data Sovereignty, and demanding <50ms failover requirements protecting high-frequency core-banking transactions.
- **The VI Business Solution Sequence:**
    - **Architecture:** Active-Active High Availability SD-WAN Hubs routing explicitly over private Layer 2 MPLS equivalents, avoiding all public internet paths. Ingress/Egress logs are strictly siloed in our Indian SOC facilities to satisfy DPDP Act 2023 mandates.
    - **Mapped SKUs:** `VI-SDW-HA-HUB` (Core Edge HA) + `VI-ACC-NLD-PTP` (Private Links) + `VI-CLD-AZURE-ER` (Private Cloud Peering) + `VI-SEC-MTR-247` (SOC Compliance Monitoring).
    - **Why we win:** We categorically guarantee no transaction logs or DPI payloads cross international internet gateways, an inherently superior security stance natively demanded by financial auditors.

3.3 Advanced Manufacturing and Smart Factories Matrix

- **Primary Challenge:** Securing massive influxes of un-patchable robotic M2M sensors while unifying legacy operational technology (OT) across separate corporate IT SD-WAN backbones.
- **The VI Business Solution Sequence:**
    - **Architecture:** Nationwide IoT SIM distributions completely isolated via dedicated Custom APN (cAPN) fabrics. Local plant internet exposure is protected via high-throughput NGFWs supporting 4Gbps+ to handle massive CAD / automated blueprint transfers.
    - **Mapped SKUs:** `VI-SDW-NGFW-ADV` (Heavy Firewall Edge) + `VI-IOT-EMM-BAS` (Sensor Fleet Console) + `VI-ACC-FBR-DIA` (1 Gbps Factory Backup pipe).
    - **Why we win:** Total air-gapping of critical IoT infrastructure via cAPN routing that physically cannot be reached by external public IP scanning or ransomware pivots.

4) Evidence and Proof-Artifact Map

Vertical Model	Architectural Diagram Code	Compliance Tie
Logistics Overlay	`Arch_Logistics_Standard.vsdx`	Standard SLA 99.95%
Banking Overlay	`Arch_BFSI_ZeroTrust.vsdx`	DPDP Act Localization Certified

5) Governance and Ownership

- **Owner:** VP, Industry Verticals Strategy
- **Reviewers:** VP Solutions, General Counsel.
- **Review Frequency:** Annually.

6) Constraints, Exclusions, and Dependencies

- **Constraints:** Vertical bundles simply package standard SKUs. Do not invent non-catalog SKUs uniquely for one industry without completing rigorous NPI (New Product Introduction) gating.
