Managed Services and Support Handbook: VI Business (India)

1) Executive Purpose and Applicability

This Handbook establishes the definitive Standard Operating Procedures (SOPs), support tier escalations, and incident management protocols VI Business (India) utilizes to operate Tier-1 enterprise networks.

Intended Audience: Service Delivery Managers, Bid Authors, Operations Leads. **Applicability:** For structuring "Day 2 Operations," "ITIL Alignment," and "Resolution SLA" sections within enterprise proposals.

2) Definitions and Assumptions

Definitions:

- **NOC/SOC:** Network Operations Center / Security Operations Center.
- **RCA:** Root Cause Analysis.
- **SME:** Subject Matter Expert.

Assumptions:

- **Internal Control:** Support SLAs defined in this handbook are contractually legally binding metrics (e.g., the <4 hour P1 containment rule). Modifications require formal legal review before RFP submission.

3) Detailed Core Sections

3.1 Support Footprint, Tiers, and Handoff Criteria Support operations run on a continuous 24/7/365 shift rotation spanning three shifts (0600-1400, 1400-2200, 2200-0600 IST).

- **Tier 1 (L1 Service Desk):** Multilingual (English, Hindi, and 6+ regional Indian languages) handling 100% of initial triage within `< 15 minutes` of alarm generation. Executes basic remote-ping diagnostics and logs the Incident in ServiceNow.
- **Tier 2 (L2 NOC/SOC Analysts):** Comprising certified engineers performing deep-packet inspection, active firewall mitigation, SD-WAN policy verification, and active isolating of branch hardware.
    - *L1 to L2 Handoff Criteria:* Ticket elevated if L1 cannot restore service remotely within 30 minutes, or instantly if a P1 security IOC is detected.
- **Tier 3 (L3 Subject Matter Experts / Architects):** Escalation point for advanced, persistent threats (APTs) or complex BGP/OSPF routing anomalies traversing the core optical NLD. OEM vendor (e.g., Cisco TAC) interaction is managed exclusively by L3.

3.2 ITIL v4 Incident Management Targets

- **P1 (Critical):** Core aggregation failure or active security breach.
  - *Action:* Containment/Resolution `< 4 hours`. Updates every 60 minutes.
- **P2 (High):** Redundant link failure (e.g., secondary LTE goes dead while active fiber remains up).
  - *Action:* Resolution `< 8 hours`. Updates every 2 hours.
- **Problem Management (RCA):** VI Business guarantees a formally structured ITIL Root Cause Analysis report within **72 hours** of closing any P1 or P2 incident, complete with defined preventive action mappings.

3.3 Hardware Field Dispatch (RMA)

- **Tier-1 Hub Locations:** Priority 4-hour on-site hardware replacement SLA (Subject to localized urban depot proximity outlined in the Site Survey).
- **Tier-2/3 Branch Locations:** Next Business Day (NBD) strict replacement target for edge SD-WAN/NGFW appliances.

3.4 Managed Security (SOC) Operations The active VI Managed SOC ingests global Threat Intelligence feeds, triggering automated containment scripts via the SD-WAN controller against flagged internal IP addresses. In cases of critical ransomware propagation, the SOC maintains unilateral authority to sever WAN routing to infected branch points immediately to preserve overall enterprise core integrity, without awaiting customer change-approval windows.

4) Evidence and Proof-Artifact Map

Operating Process	Evidence Document	Repository Link
ITIL v4 Alignment	`VI_ITIL_Operating_Model.pdf`	`SharePoint/VIB_Ops/Quality`
Escalation Matrices	`Customer_Escalation_Tree.xlsx`	`SharePoint/VIB_Ops/Governance`

5) Governance and Ownership

- **Owner:** VP, Managed Services Operations
- **Reviewers:** NOC Director, SOC Director, enterprise Customer Success.
- **Review Frequency:** Annually.

6) Constraints, Exclusions, and Dependencies

- **Exclusions:** "Day 2" operational support strictly ends at the LAN port of the VI-provided SD-WAN/Firewall router. VI Business (India) is not contractually obligated to troubleshoot internal customer LAN switching, local Wi-Fi, or application-level server faults (e.g., SAP database hangs) unless an explicit IT OS-Management SOW is attached.
