Document Owner: Head of OEM Alliances & Partnerships

Partner and OEM Ecosystem Guide: VI Business (India)

1) Executive Purpose and Applicability

VI Business (India) strategically functions as a master System Integrator (SI) and Managed Service Provider (MSP). This internal guide maps the certified Original Equipment Manufacturer (OEM) relationships and Hyperscaler alliances that construct our managed infrastructure boundaries.

Intended Audience: Solutions Architects, Bid Managers, Partner Alliance Leads. **Applicability:** For responding to RFP requirements querying hardware/software vendor specifics, technology stacks, or proof of direct-to-manufacturer support tiers.

2) Definitions and Assumptions

Definitions:

- **OEM:** Original Equipment Manufacturer.
- **CPE:** Customer Premises Equipment.

Assumptions:

- **Internal Control:** VI Business strictly utilizes a pre-tested, certified subset of OEM hardware for managed solutions. Proposing untested third-party OEMs drastically impacts our ability to mathematically guarantee the standard 99.99% network SLA.

3) Detailed Core Sections

3.1 SD-WAN and Network Edge OEMs VI Business (India) maintains highest-tier strategic partnership levels with leading routing and security networking brands:

- **Cisco / Meraki:** Gold Certified Partner. Utilized primarily for scalable SD-WAN architecture requiring robust, application-aware routing overlays.
- **Fortinet:** Platinum / Expert level Partner. Deployed extensively where Security (NGFW) and SD-WAN controller functions must be consolidated into a single branch appliance.
- **Palo Alto Networks:** Prisma SD-WAN and NGFW integrations utilized for Zero-Trust enterprise perimeter requirements.

3.2 Hyperscaler Interconnect Alliances We bypass standard public internet routing by integrating directly with massive domestic cloud availability zones:

- **Microsoft Azure ExpressRoute Partner:** Validated and certified to install, manage, and monitor Layer 2/3 direct connections linking our Primary Data Centers (e.g., NESCO Mumbai) to Azure's Central India (Pune) region.

- **AWS Direct Connect Delivery Partner:** Certified ability to terminate high-speed 10Gbps dedicated fibers directly into AWS ap-south-1 (Mumbai).

3.3 Cybersecurity and SOC Threat Intelligence

- Our Managed SOC leverages Tier-1 commercial Threat Intelligence (including Recorded Future and CrowdStrike Intelligence).
- These feeds are systematically integrated into our DPDP Act-compliant Indian-hosted SIEM instances (e.g., Microsoft Sentinel or IBM QRadar), forming the baseline of our `<4 hour` P1 containment architecture.

3.4 IoT EMM Ecosystem

- Strategic alliances with primary M2M module manufacturers and GSMA-compliant remote-SIM provisioning (eSIM) platforms allow our native EMM structure to seamlessly update and manage millions of active tags.

4) Evidence and Proof-Artifact Map

Partner / Designation	Internal Verification Path	Owner
Azure ExpressRoute Partner	`SharePoint/VIB_Alliances/Cert_Azure.pdf`	Cloud Alliance Head
AWS DX Delivery Partner	`SharePoint/VIB_Alliances/Cert_AWS.pdf`	Cloud Alliance Head
Cisco Gold Integrator	`SharePoint/VIB_Alliances/Cert_Cisco.pdf`	OEM Alliance Lead

5) Governance and Ownership

- **Owner:** Head of OEM Alliances & Partnerships
- **Reviewers:** VP Products, VP Core Networks, General Counsel.
- **Review Frequency:** Annually, tied strictly to individual partner recertification renewal dates.

6) Constraints, Exclusions, and Dependencies

- **Compliance Constraint:** VI Business (India)'s support SLA framework explicitly excludes unauthorized or gray-market hardware deployments. Customers requiring the integration of legacy or uncertified CPEs into the managed overlay must sign a distinct Liability Waiver forfeiting stated SLAs.
