Privacy and Data Protection Pack: VI Business (India)

1) Executive Purpose and Applicability

This Privacy and Data Protection Pack codifies VI Business (India)'s definitive stance on data residency, network telemetry storage, and localized compliance. It serves as the primary evidence repository proving alignment with India's Digital Personal Data Protection Act, 2023 (DPDP Act).

Intended Audience: Data Privacy Officers, CISO, Deal Desk, Bid Managers. **Applicability:** Essential for answering RFP questions querying data residency constraints, SIEM log retention mechanisms, and cross-border transfer limitations.

2) Definitions and Assumptions

Definitions:

- **DPDP Act, 2023:** Digital Personal Data Protection Act of India, strictly governing the processing of digital personal data.
- **Data Fiduciary:** The entity determining the purpose and means of processing personal data.
- **Data Processor:** The entity processing personal data solely on behalf of a Data Fiduciary.

Assumptions:

- For enterprise managed network solutions, the enterprise Customer inherently serves as the **Data Fiduciary** and VI Business (India) acts explicitly as the **Data Processor** (with specialized exceptions for direct employee billing parameters where VI acts as a Fiduciary).

3) Detailed Core Sections

3.1 DPDP Act 2023 Conformity and Data Residency

- **100% Data Localization Enforcement:** VI Business mandates strict data localization for its core enterprise networking and security operations. All SD-WAN orchestrator backups, configuration templates, and SOC SIEM logs are generated, stored, and analyzed exclusively within Tier-III data centers located within the Republic of India (e.g., Pune, Mumbai).
- **Cross-Border Transfer Controls:** Log data and payload traffic traversing the managed SD-WAN backbones or ExpressRoute fabrics are structurally prevented from routing outside Indian jurisdiction natively. Any international diversion requires explicit, documented BGP configuration requests initiated by the Customer (Data Fiduciary).

3.2 Managed SOC and SIEM Privacy Controls Our Managed Security Operations Center (SOC) processes substantial telemetry volumes to achieve the sub-4-hour P1 containment SLA.

- **Log Retention Boundaries:** Logs ingested by our SIEM infrastructure are subjected to highly regulated retention limits—typically adhering to a 90-day "Hot Storage" sequence and a 12-month "Cold Archive" rotation, unless specific secondary regulatory mandates (e.g., banking regulations) dictate longer horizons.
- **Access Control:** Read/Write access to historical SIEM logs is strictly bounded by Role-Based Access Control (RBAC), restricted temporally to vetted SOC analysts investigating active incidents.

3.3 Enterprise IoT Telemetry Processing The Enterprise Mobility Management (EMM) platform, managing an aggregate fleet of over 2.5 million IoT SIMs, inherently collects location metadata and ICCID connectivity traces.

- **Purpose Limitation Constraint:** This telemetry is processed *exclusively* for the purpose of localized billing optimization, coverage mapping, and SIM lifecycle management.
- **Tokenization Limits:** We tokenize identity linkages connecting SIMs to individual operational personnel, mathematically satisfying Privacy by Design protocols.

3.4 Lawful Interception (Regulatory Monitoring) As a Unified License (UL) holder operating under the Department of Telecommunications (DoT), VI Business inherently balances enterprise privacy expectations with national security mandates.

- We operate DoT-mandated Lawful Interception and Monitoring (LIM) gateways. While customer commercial payload data remains encrypted in transit via SD-WAN (IPsec/TLS boundary), the underlying network telemetry streams are subject to interception natively by authorized Indian intelligence agencies without Customer notification.

4) Evidence and Proof-Artifact Map

Privacy Topic	Evidential Document	Repository Location
Architecture Privacy Impact	`DPIA_Summary_Network_Fabric.pdf`	`SharePoint/VIB_Privacy`
Localization Attestation	`Legal_Letter_Data_Localization.pdf`	`SharePoint/VIB_Legal`

5) Governance and Ownership

- **Owner:** Data Privacy Officer (DPO) / Head of Legal Compliance
- **Reviewers:** Enterprise CISO, General Counsel.
- **Review Frequency:** Annually, mapping identically to gazette updates issued regarding DPDP enforcing rules.

6) Constraints, Exclusions, and Dependencies

- **Exclusions:** VI Business exercises absolutely no control or processing rights over Data Subjects interacting directly with the Customer-owned application layer databases (e.g., Customer CRMs hosted in AWS), removing VI entirely from that specific processing chain liability.
