Document ID: VIB-COM-005 Classification: INTERNAL CONFIDENTIAL Effective Date: 2024-04-01 Version: 2.8

Document Owner: VP, Managed Services Operations

SLA and KPI Standard Matrix: VI Business (India)

1) Executive Purpose and Applicability

The SLA and KPI Standard Matrix provides an authoritative schedule of service level commitments—encompassing uptime, latency, MTTR, and incident reaction boundaries. This document serves as the absolute ceiling for operational guarantees made during competitive bidding.

Intended Audience: Service Managers, Commercial Analysts, RFP Writers. **Applicability:** For responding securely to RFP Service Level Annexures, providing quantitative targets backed by financial penalty frameworks.

2) Definitions and Assumptions

Definitions:

- **MTTR:** Mean Time to Repair / Resolve.
- **P1/P2/P3/P4:** Priority Incident Levels mapping to ITIL v4 incident models.

Assumptions:

- **Internal Control:** Promising any SLA target superior to those defined in Section 3.1 requires authorization from the VP Managed Services Operations and Regional CFO.

3) Detailed Core Sections

3.1 Network Availability Metrics

Infrastructure Component	SLA Target	Measurement Basis	Measurement Constraint
Tier-1 Hub (Dual Link Active/Active)	99.99%	Monthly	Requires redundant power / HA Chassis
Tier-2/3 Branch (Active/Standby ZTP)	99.95%	Monthly	Measured at the SD-WAN CPE edge
SD-WAN Link Failover Event	< 50ms	Per Event	Must execute stateful session preservation
ExpressRoute Latency (NESCO to Azure)	< 8ms	Round Trip	Based on 95th percentile polling
Direct Connect Port Availability	99.9%	Monthly	Core switchport to AWS demarc

3.2 SOC Incident Response Targets (ITIL v4 Aligned)

Incident Level	Description	Acknowledgement Time	Update Frequency	Target Resolution / Containment
P1 (Critical)	Core systemic failure, active network breach, ransomware pivot.	15 Minutes	Every 1 Hour	Containment `< 4 Hours`
P2 (High)	Degradation of critical HA link, DDoS attempt, elevated SIEM alert.	30 Minutes	Every 2 Hours	Resolution `< 8 Hours`
P3 (Medium)	Intermittent jitter/latency, localized performance issues.	2 Hours	Every 8 Hours	Resolution `< 24 Hours`
P4 (Low)	Standard service requests, policy changes, routine queries.	4 Hours	Daily	Resolution `NBD - 3 Days`

3.3 Provisioning and RCA Commitments

- **ZTP Activation:** Branches utilizing standard Edge CPE provisioning are guaranteed to reach SD-WAN overlay integration within **4 hours** of physical local power activation and WAN handoff.
- **Root Cause Analysis (RCA):** Post-incident analysis reports for all P1/P2 failures are delivered to the primary customer contact within **72 hours** of formal ticket stabilization and closure.
- **IoT Provisioning:** Bulk EMM provisioning requests scale dynamically, supporting `< 2-hour` portal reflection for active batches.

4) Evidence and Proof-Artifact Map

Metric Target	Enforcement Engine	Report Formats
Network Availability	Overlay Orchestrator Dashboard	Monthly Service PDF
SOC Containment limits	ITSM ServiceNow Log Engine	SLA Exception Report

5) Governance and Ownership

- **Owner:** VP, Managed Services Operations
- **Reviewers:** Deal Desk, Corporate Legal, Enterprise CISO.
- **Review Frequency:** Annually.

6) Constraints, Exclusions, and Dependencies

- **Dependencies:** These SLAs strictly align with the liability structures defined in the *Standard Terms and Conditions*, capping aggregated SLA financial credits to **10% to 15%** of the offending service's MRC.
- **Force Majeure/Exclusions:** Service interruptions triggered by mass regional power grid collapses, global hyperscaler outages, or physical infrastructure vandalism at the customer demarcation point automatically suspend MTTR measurements.
