Operational Reporting Catalog: VI Business (India)

1. Executive Purpose and Document Scope

The Operational Reporting Catalog details the standardized analytical outputs, dashboards, and automated metrics generated by the VI Business (India) BSS/OSS stack for enterprise managed service customers.

This artifact proves to enterprise CIOs that our service delivery is transparent, mathematically measurable against signed SLAs, and designed to provide actionable intelligence rather than unreadable raw data dumps.

2. Definitions, Assumptions, and Applicability

Definitions:

- **BSS/OSS:** Business Support Systems / Operations Support Systems.
- **SLA:** Service Level Agreement.
- **QBR:** Quarterly Business Review.

Assumptions:

- All reports are generated directly from the central SIEM (Splunk) or the underlying ServiceNow ITSM platform to ensure immutable accuracy. Manual spreadsheet generation is strictly prohibited for contractual reporting.
- All times are recorded and reported in Indian Standard Time (IST).

Applicability:

- **Target Audience:** Bid Writers, Service Delivery Managers (SDM), Enterprise Customer Success Managers (CSM).
- **Scope:** Managed SD-WAN, Enterprise MPLS Core, SOC, and SIP Trunking usage.

3. Standard Reports and Dashboards

VI Business offers a tiered reporting structure ranging from real-time tactical views to monthly strategic rollups.

3.1 The Enterprise Self-Care Portal (Real-Time Dashboard)

- **Content:** Live circuit up/down status, active ticket (INC) queue, current BGP peer states, and top-talker application bandwidth utilization.
- **Audience:** Customer L1/L2 Network Administrators.
- **Frequency:** Real-time (refreshed every 60 seconds via API).
- **Distribution:** Secure web portal access (SSO/SAML 2.0 supported).

3.2 Weekly Tactical Incident Report

- **Content:** A summarized list of all open, resolved, and pending tickets from the previous week. Highlights aged tickets (>5 days) and identifies sites with repeating "flapping" behavior.
- **Audience:** Customer IT Managers, VI Delivery Managers.
- **Frequency:** Automated email distribution every Monday at 09:00 IST.

3.3 Monthly SLA Performance & Attainment Report

- **Content:** The definitive legal document calculating uptime percentage per circuit, Mean Time to Respond (MTTR), Mean Time to Resolve (MTTRes), and the calculated penalty/service credits applied for any breaches.
- **Audience:** Customer CIO/CTO, IT Procurement.
- **Frequency:** Delivered by the 5th Business Day of the subsequent month.

3.4 Quarterly Business Review (QBR) Deck

- **Content:** Strategic aggregation. Trend analysis comparing Q1 vs Q2 ticket volumes, proactive capacity planning recommendations (e.g., "Upgrade Branch 12 bandwidth"), and a review of impending hardware End-of-Life (EoL) dates.
- **Audience:** Customer C-Suite, VI Enterprise Account Director.
- **Frequency:** Presented live every 90 days.

4. Operational Metrics (KPIs)

The following Key Performance Indicators (KPIs) form the core of all operational reports:

- **Availability (%):** Calculated mathematically as `((Total Minutes in Month) - (Total Outage Minutes)) / (Total Minutes in Month) * 100`.
- **Packet Loss / Latency / Jitter:** Polled averages over the 30-day period across the core MPLS/SD-WAN underlay.
- **First Call Resolution (FCR %):** The percentage of tickets closed by the L1 Service Desk without requiring L2/L3 escalation.
- **Threat Containment (SOC specific):** Time from initial SIEM alert trigger to active firewall block rule implementation.

5. Billing and Usage Reports

Transparency in billing, particularly for usage-based services, is a primary differentiator.

- **SIP Trunking Call Detail Records (CDR):** Itemized lists of all inbound/outbound calls, durations, destination codes, and associated micro-charges. Generated dynamically and accessible via the Self-Care portal.
- **Enterprise Mobility (IoT) Data Usage:** Grouped data pool consumption reports. Alerts are automatically triggered at 80%, 90%, and 100% of the contracted monthly data limit to prevent bill shock.
- **Consolidated Invoicing:** Multiple regional branches roll up into a single, comprehensive HQ invoice, segregated logically by cost center or billing account number.

6. Frequency and Distribution Method

The delivery mechanism is standard across the enterprise customer base to ensure scalability:

Report Type	Frequency	Distribution Mechanism	Access Control
Real-Time Dashboard	Live	HTTPS Web Portal	Role-Based Access Control (RBAC)
Tactical Incident Status	Weekly	Automated PDF/CSV Email	Whitelisted Customer IT Contacts
Monthly SLA Review	Monthly	PDF Email / Portal Archive	Customer CIO / IT Procurement
QBR Deck	Quarterly	Live Presentation (WebEx/Teams)	C-Suite / Account Directors

7. Constraints, Exclusions, and Dependency Notes

- **Custom Reporting Limitation:** While VI Business provides extensive standardized telemetry, any request for deeply customized report structures (e.g., "Re-format the SLA report to match our internal legacy SAP matrix") requires scoping by Professional Services as a paid commercial engagement.
- **Raw Data Access:** Customers may download up to 90 days of raw historical reporting data via CSV directly from the portal. Direct SQL access to the underlying VI databases is strictly prohibited under the Information Security Policy.

8. Proposal-Use Guidance

- **Addressing Transparency Demands:** When an RFP asks, "How will you prove you met the SLA?", immediately reference Section 3.3. Enterprise buyers mistrust vendors who rely on verbal assurances.
- **Differentiation:** Emphasize the Real-Time Dashboard (Section 3.1) to demonstrate that the customer retains a "single pane of glass" visibility into their network, despite it being a fully managed service.

9. Governance and Ownership

- **Owner:** National Head of Service Operations
- **Reviewers:** Deal Desk, BSS/OSS Architecture Team
- **Update Cadence:** Annual, verified against major upgrades to the ServiceNow or Portal software platforms.
