Proposal Pricing Assumptions Guide: VI Business (India)

1. Executive Purpose and Document Scope

The Proposal Pricing Assumptions Guide delineates the strict framework of caveats and preconditions underpinning every commercial quote issued by VI Business (India).

This document safeguards corporate margins. It ensures that when a Bid Writer submits a multi-crore response to a Request for Proposal (RFP), the pricing is legally bound to a specific, baseline physical and operational reality. If the customer alters that reality post-signature, these assumptions trigger the formal Change Request (CR) process.

2. Definitions, Assumptions, and Applicability

Definitions:

- **OTC:** One-Time Charge (e.g., Installation, Hardware).
- **MRC:** Monthly Recurring Charge (e.g., Bandwidth, Management fee).
- **BoM:** Bill of Materials.
- **CapEx:** Capital Expenditure.

Assumptions:

- All pricing assumptions naturally expire 90 days from the original proposal submission date. If an RFP extends beyond 90 days, the commercial tables must be re-validated by the Deal Desk against prevailing OEM hardware exchange rates.

Applicability:

- **Target Audience:** Bid Managers, Solution Architects, Legal Counsel, and Enterprise Procurement departments.
- **Scope:** Managed SD-WAN, Enterprise SIP Trunking, Colocation, and IoT MSAs.

3. The Assumption Framework and Legal Binding

Every commercial proposal submitted by VI Business must contain the "Standard Commercial Annexure." The pricing (the "Outputs") is mathematically derived from the assumptions (the "Inputs").

- **Legal Protection:** If the site feasibility changes (e.g., rural vs urban building permission), the core OTC assumptions fail, triggering an immediate commercial revision before the physical hardware is ordered.

4. Site Readiness Assumptions

VI Business installation pricing (OTC) assumes the customer is prepared to receive the physical equipment.

- **Building Access:** Pricing assumes the customer will secure all necessary municipal, building management, and Right of Way (RoW) permissions for active fiber trenching from the building perimeter to the internal server room. VI Business will *not* bear the cost of local municipal extortion or "society fees."
- **Internal Pathways:** The customer must provide unobstructed, cored ducting pathways for physical fiber pulls within the building.
- **Delays:** If a field engineer is dispatched but the site is locked or denied entry by customer security, a "Fruitless Visit" surcharge of INR 5,000 per engineer, per day applies.

5. Power, Rack, and Customer Dependency Assumptions

The integrity of the hardware and the 99.99% core SLA rests entirely upon environmental stability.

- **Power & Cooling:** Pricing assumes the customer provides stable, Uninterruptible Power Supply (UPS) output, grounded power sockets, and a climate-controlled server room (sub-25°C). Hardware failures directly traced to brownouts or un-earthed power spikes will void the free Next Business Day (NBD) replacement clause.
- **Rack Density:** VI Business pricing assumes standard 19-inch rack availability (minimum 2U per edge site). Wall-mounting brackets or bespoke ruggedized enclosures must be explicitly declared and costed in the BoM.
- **LAN Compatibility:** The quoted solution terminates cleanly at the router's LAN port. Any requirement for VI Business to actively reconfigure the customer's downstream LAN switching architecture is strictly charged as Professional Services.

6. Tax and Currency Assumptions

As an Indian enterprise telecommunications operator, all MSAs conform to standard Indian statutory regulations.

- **Currency:** All quotes, purchase orders, invoices, and payments must be exclusively executed in Indian Rupees (INR), regardless of the customer's multinational status.
- **Taxation (GST):** All stated prices (both OTC and MRC) are strictly **exclusive** of the Goods and Services Tax (GST) and any other applicable statutory cesses/levies. GST at the prevailing DoT/Finance Ministry rate (currently 18% for telecom services) will be applied at the time of final invoicing.
- **Hardware Import Fluctuations:** If the underlying hardware BoM heavily leans on USD-denominated imports (e.g., massive Cisco or Fortinet firewalls), the INR OTC remains valid *only* if the USD-to-INR exchange rate does not fluctuate by more than +/- 5% during the 90-day proposal validity window.

7. Out-of-Scope Pricing Conditions

To prevent scope creep, these activities are explicitly excluded from standard managed service proposals unless a secondary BoM is generated:

1. **Deduplication/Optimization Tuning:** While SD-WAN licenses are provided, granularly tuning application performance metrics (e.g., rewriting ERP TCP sliding windows) is not an included Day-2 operation.

2. **Custom API Middleware:** We provide access to standard Webhooks and APIs. Writing the Python/Java scripts to integrate those outputs into the customer's legacy, bespoke SAP/ServiceNow instance is outside the pricing scope.
3. **Third-Party Ransomware Negotiation:** For SOC deals, VI Business identifies the breach and blocks the firewall ports. Providing legal or cryptocurrency negotiation services with threat actors is entirely out of scope.

8. Proposal-Use Guidance

- **RFP Use:** When formatting an RFP response, the Bid Writer MUST append Sections 4, 5, and 6 to the bottom of the "Pricing Matrix" tab or appendix. Never submit raw Excel pricing tables without these accompanying dependencies.
- **Defending Surcharges:** Use Section 4 (Building Access) to defensively justify why a standard installation cost ballooned because the municipal authority demanded a massive road-cutting deposit.

9. Governance and Ownership

- **Owner:** National Head of Commercial & Deal Desk
- **Reviewers:** CFO, Head of Operations, Solutions Engineering.
- **Update Cadence:** Evaluated quarterly to ensure alignment with DoT statutory taxation shifts or massive currency fluctuations.
