Customer Success and Service Review Framework: VI Business (India)

1. Executive Purpose and Document Scope

The Customer Success and Service Review Framework formally defines the high-touch engagement protocols, proactive monitoring rhythms, and operational improvement cycles delivered to VI Business (India) enterprise customers.

The objective of this framework is to pivot from reactive fault-fixing to proactive value-add, maximizing client retention, preventing Service Level Agreement (SLA) penalty payouts, and fostering targeted account growth through systematic Business Reviews.

2. Definitions, Assumptions, and Applicability

Definitions:

- **CSM:** Customer Success Manager. The designated operational advocate post-sale.
- **SIP:** Service Improvement Plan.
- **QBR/MBR:** Quarterly / Monthly Business Review.
- **NPS:** Net Promoter Score.

Assumptions:

- The frequency and depth of reviews are strictly dictated by the contracted Total Contract Value (TCV). Standard enterprise accounts (INR 1 Crore - 10 Crores TCV) inherit the QBR rhythm.
- The CSM does not replace the Level 2/Level 3 Incident Management NOC teams during an active outage; the CSM is responsible for post-incident strategic remediation.

Applicability:

- **Audience:** RFP Writers outlining "Post-Sales Support," Account Managers (AM), and designated CSMs executing the framework.
- **Scope:** Exclusively applicable to fully managed services (Managed SD-WAN, SOC, Enterprise Mobility, multi-site MPLS). Unmanaged "dumb pipe" leases (e.g., plain internet leased lines) default to basic react-and-repair support.

3. The Customer Success Model

VI Business assigns named Customer Success teams based on the complexity and strategic value of the account tier.

3.1 Tiered Engagement Model

Account Tier	Minimum Engagement Cadence	Dedicated Resource	Access Profile
Platinum (Top 100)	Weekly Touchpoint, Formal QBR	Named National CSM	Direct escalations via CEBO/Head of NOC
Gold (> INR 1 Crore)	Monthly Touchpoint, Formal QBR	Regional CSM Pool	Priority routing to Level 2 NOC/SOC
Silver (< INR 1 Crore)	Ad-hoc reactive, Annual Review	Shared Support Desk	Standard Level 1 IVR Routing

3.2 The First 90 Days (Hypercare)

Following any major managed network cutover or API integration (e.g., 500+ SD-WAN branch deployment), the customer enters a mandatory 90-day "Hypercare" period.

- A dedicated Hypercare engineer monitors the specific customer Virtual Routing and Forwarding (VRF) tables daily.
- Weekly optimization calls are held to tune SD-WAN application logic policies before transitioning the account to steady-state operations.

4. Business Review Structure (QBR/MBR)

The formal Business Review is the cornerstone of the CSM engagement. It is a mandatory governance milestone logged in Salesforce.

4.1 Required QBR Agenda

1. **SLA Performance Review:** Mathematical verification of network 99.95%/99.99% core availability and P1 resolution metrics.
2. **Capacity and Threshold Trending:** Analysis of peak bandwidth utilization (e.g., highlighting optical loops hitting >80% utilization during regional business hours).
3. **Security Threat Landscape (If SOC attached):** Aggregation of thwarted DDoS attempts, malware indicators of compromise (IoC), and proactive firewall rule tuning.
4. **Strategic Roadmap Alignment:** Introducing new VI Business capabilities (e.g., ZTNA overlay offerings) matching the customer's IT expansion plans.

5. Adoption and Satisfaction Measures

We utilize quantitative scoring to trace the trajectory of an account *before* a renewal negotiation begins.

- **Platform Adoption Monitoring:** For SD-WAN, we trace the volume of policy changes executed via our self-care orchestrator. Under-utilization indicates advanced feature neglect, prompting a targeted training webinar by the CSM.
- **Transactional NPS (tNPS):** A micro-survey dispatched immediately following a P1 or P2 incident closure.
- **Relationship NPS (rNPS):** An annual executive-level survey sent to the customer CIO/CTO to evaluate strategic alignment. Accounts dropping beneath an NPS of '30' are flagged for immediate SIP intervention.

6. Service Improvement Plan (SIP) Governance

If an account experiences three major SLA breaches within a 90-day rolling window, a mandatory Service Improvement Plan (SIP) is initiated.

- **SIP Trigger:** 3 P1 Core Outages, or trailing 3-month availability falling below 99.5%.
- **Execution:** The CSM, Lead Solution Architect, and Regional Operations Head form a SWAT team to execute a root-cause forensic audit.
- **Outcome:** A formal, chronologically bound Remediation Document is presented to the customer CIO within 14 days, detailing exact optical rerouting, hardware replacement, or BGP tuning taking place at VI's explicit expense to restore standard performance.

7. Renewal Support Touchpoints

The CSM facilitates the administrative glide path for frictionless contract renewals.

- **T-Minus 180 Days (Before Expiry):** The CSM triggers a joint pipeline review with the AM. The capacity trending reports from the previous three QBRs are utilized to pitch automatic bandwidth upgrades (e.g., upgrading 10 Mbps links to 50 Mbps upon renewal).
- **T-Minus 90 Days:** Re-mapping of obsolete edge hardware. If CPE (e.g., legacy routers) are approaching End-of-Life (EOL), the CSM aligns the renewal quote with a staggered ZTP hardware refresh cycle.

8. Constraints, Exclusions, and Dependencies

- **Reporting Timelines:** Raw SLA reporting data is extracted from the Pune data lake. Reports are guaranteed to the client by the 5th business day of the subsequent month.
- **Penalty Disbursements:** While the CSM validates SLA breaches during QBRs, the actual issuance of recurring revenue credits (penalties) requires distinct enterprise Deal Desk and Finance Director authorization.

9. Proposal-Use Guidance

- **RFP Use:** When responding to "Account Management Philosophy" or "Post-Deployment Life Cycle" questions, directly extract Section 3 and Section 4.
- **Proof Point:** Rely on the formal "QBR structure" and "Hypercare" model to prove VI Business acts as a managed partner rather than a transactional bandwidth provider.

10. Governance and Ownership

- **Owner:** National Head of Customer Success Management
- **Reviewers:** Head of Enterprise Commercials, CEBO
- **Update Cadence:** Annual framework review synced with the broader ITIL v4 operations audit.
